EDUCATION

Estácio de Sá

Bachelor's degree in Computer Science

Santa Maria, RS

Sep. 2023 - Aug. 2027

EXPERIENCE

Backend .NET Developer

Nov. 2023 – Present

Mercado Eletrônico

São Paulo, SP

- Experience in the modernization of a high-traffic financial and e-commerce platform serving over 3 million daily users.
- Migration of over 50K+ clients, plans and billable metrics from a legacy .NET Framework billing system to an event-driven .NET Core microservice.
- Developed a modern billing microservice using gRPC, Postgre, RabbitMQ, MongoDB, and MediatR.
- Development of over 20+ usecases based on CQRS, with over 90% line coverage via xUnit tests and full integration with both gRPC and HTTP endpoints.
- Optimized over 100+ MSSQL queries and ASP pages, reducing processing time by over 70% in most cases.
- Integrated key tools and technologies into a monolithic system, including Redis for caching, Grafana for monitoring, and AWS EC2 for infrastructure scalability.

Embedded Development Research Assistant

Oct. 2023 – Jan. 2024

Universidade Federal de Santa Maria

Santa Maria, RS

- Developed ESP32 firmware for population flow monitoring system serving the Technical Industrial School of Santa Maria, enabling real-time occupancy tracking and data collection.
- Implemented features including automated timed reboot and logging mechanisms for system reliability and debugging using Arduino.
- Refactored legacy code by eliminating code smells, improving system performance and maintainability while implementing alternatives.
- Contributed 10K+ lines of code to the established codebase using Git.

PROJECTS

Approval Engine | *PostgreSQL, C#, .NET Core, Entity Framework, xUnit, Swagger*

Mar. 2024

- Developed an automated system for reimbursement document approval, the final project of the DiverseDEV program (Mercado Eletrônico + Ada).
- Rule-based decision engine, eliminating manual processes and ensuring consistency in approvals
- Maintainability of entities via Postgres and Entity Framework
- Implementation of logs via Seriallog

URL Shortener | *Swagger API, Test-Driven Development, Microsoft SQL Server, Entity Framework*

Mar. 2024

- URL shortener built during the DiverseDEV program as a TDD challenge.
- Fully functional URL shortener, with programmable time-span for each link
- Tests done via xUnit, documentation via Swagger, SQLServer as the DB and Entity Framework as ORM

Quoty | *Amazon EC2, Deno, Vue, Linux, Docker, Amazon Web Services (AWS), Cloud Computing*

Mar. 2025

- Fullstack project that returns a quote from James Joyce's Finnegans Awakens in each request.
- Deployed over AWS EC2, manually configured to study SSH and SRE concepts

TECHNICAL SKILLS

Languages: C #, Python, C / C++, SQL (Postgres, MSSQL), Typescript

Frameworks: React, Vue, Node.js, Deno, xUnit, .NET, MongoDB, Redis

Developer Tools: Git, Docker, AWS, Neovim, Rider, Compass, Linux

Libraries: Entity Framework, MediatR, AutoMapper, AWS, gRPC
